ABOUT ME

System & Network Engineering professional with practical knowledge of networking, Linux, Windows, hardware, system administration, troubleshooting, and technical support. Familiar with Python, Flask, SQL, HTML, CSS, and JavaScript, with experience building small practical software and networking projects. Interested in system and network infrastructure, troubleshooting, automation, and developing reliable technical solutions.

EDUCATION

M.Sc. Materials Science and Technology, CGPA: 9.68

Pondicherry Technological University | 2021-2023

B.Sc. Physics, CGPA: 8.50

Tagore Government Arts and Science College | 2018 - 2021

EXPERIENCE

Web Developer (Intern) - Balsam Creative Technology

2024

- Assisted in designing and developing website components while supporting overall project execution and timely delivery.
- Demonstrated strong self-learning ability, technical adaptability, and on-time project completion.

Associate Corporate IT Trainer - Balsam Creative Technology

2025 - Present

- Spearheaded multi-domain technical training covering hardware & networking, programming (Python, C, C++), database (SQL), Linux systems, web technologies, and enterprise SAP (FICO & MM).
 - Delivered end-to-end troubleshooting support across hardware, operating systems, optimized lab environments by configuring systems, and applications stacks.
-

PROFESSIONAL CERTIFICATIONS

- Advanced Diploma in System and Network Engineer**
- Diploma in Python and Flask Framework**

VKR Solutions

Ocean Academy

PROJECTS

ATM Management System

Tech Skills - Python and SQLite

- Developed a console-based ATM System Management project in Python, implementing core banking operations such as user authentication, balance inquiry, cash deposit, and withdrawal to simulate real-world ATM functionality.
- Applied procedural programming principles to handle user input validation, maintain account state, and structure transaction logic, demonstrating practical command-line app design in Python.

Network Diagnostic API

Tech Skills - Python, FastAPI, Pydantic

- Developed a REST API for network diagnostics, including Ping, DNS, TCP port, HTTP/HTTPS, latency and jitter checks.
- Implemented Pydantic validation, structured JSON responses, centralized error handling, logging, and private-target security controls.
- Built a modular FastAPI service architecture with asynchronous operations, automated API documentation, and a pytest test suite.
